

GODS UNIVERSE

GENERATE A NEW WORLD OF META UNIVERSE.

GODS UNIVERSE COMMUNITY

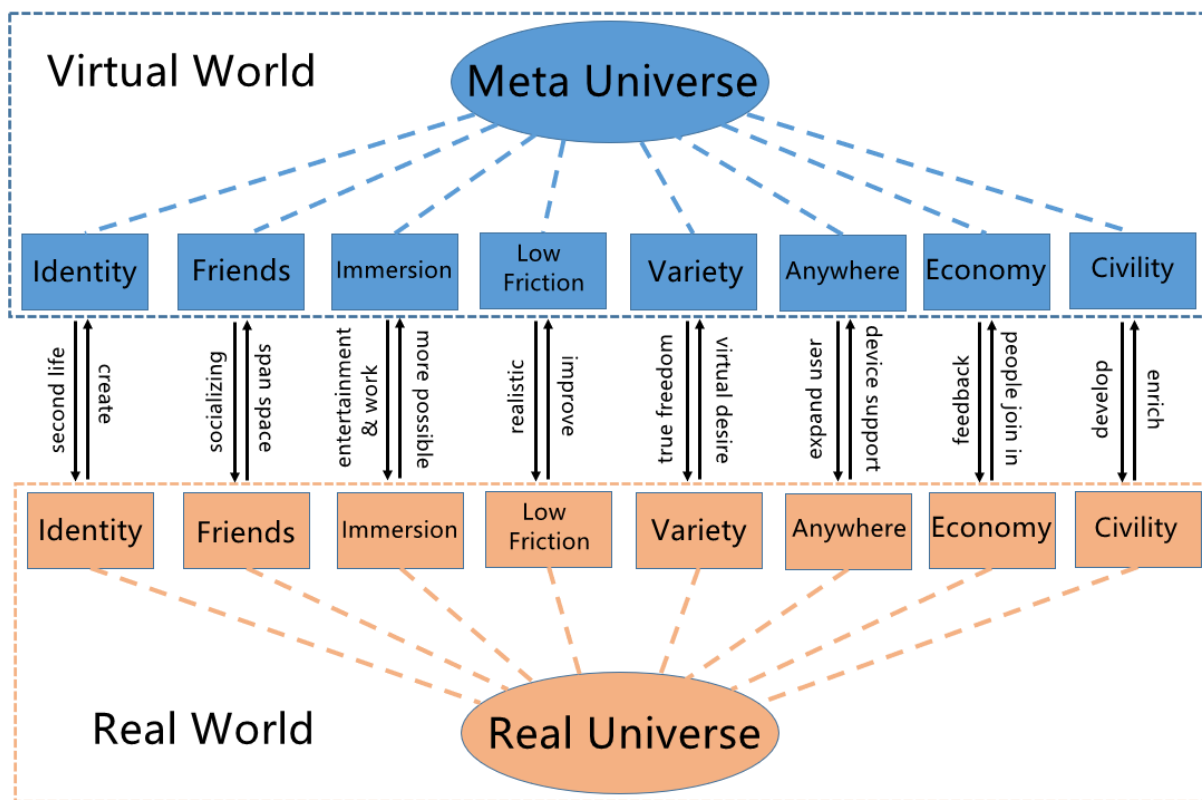

JULY 2021

VERSION 1.0

An introduction to the background of Gods Universe (meta universe)

The meta universe that gathered by virtual world has been regarded as a great and promising investment theme, and has become the new territory of digital economy innovation and industrial chain. Moreover, meta universe provides a new path for human society to finally achieve the ultimate digital transformation, and will have an all-round intersection with the post-human society. It's a new era with great historical significance as same as the era of great navigation, industrial revolution, and aerospace.

Baszucki, the founder of Roblox, gave a more standardized and visualized concept of meta universe, that should meet at least eight key characteristics: identity, friends, immersion, low latency, diversification, anywhere, economic system, and civilization. Among them, civilization is the ultimate development direction.

Meta universe originated from games, but will go over games. On the one hand, the infrastructure and framework of Meta universe built with games have become mature; on the other hand, the boundary between games and the reality begins to disappear, the founder is only the earliest player, rather than the owner, rules are determined by the community.

Based on Baszucki's standard, Meta Universe = creation + entertainment + display + social interaction + transaction, and people will have in-depth experience in Meta Universe.

Jon Radoff, the founder of Beamable, proposed seven levels of Meta Universe: experience; discovery; creator economy; spatial computing; decentralization; Human-computer interaction; infrastructure.

In 2020, under the background of epidemic, the following typical events have triggered people's expectations of meta universe: First, virtual concerts. The famous American pop-star Travis Scott held a virtual concert in the game Fortnite, and 12.3 million gamers worldwide became the audience of this virtual concert. The second is virtual education. Parents held birthday parties for their children on the sandbox games Minecraft and Roblox. Third, virtual finance. CNBC reported on the real estate wave of Meta Universe and invested in the establishment of Meta Universe. An all-round virtualized meta universe asset and wealth model is taking shape. Fourth, the virtualization of academic activities. ACAI, the world's top AI academic conference, held a seminar on Animal Crossing Society (Animal Crossing Society). Fifth, virtual creation. Roblox affects the entire ecology of games, attracting more than 100 million monthly active players and has more than 18 million game experiences.

People can quickly switch identities anytime and anywhere, shuttle between the real and virtual worlds, and enter meta universe constituted by virtual space and time nodes at will, from which they can learn, work, make friends, shop, and travel. People cannot imagine such an economic system, social system, and social ecology.

A teacher named Zhu Jiaming once envisioned that in the beginning of meta universe, people in the real world obtained virtual identities through digital mapping, so they can realize the virtual configuration of the physical, cultural, psychological and spiritual existence of traditional people. Then they can become the first virtual aborigines of the meta universe. These natives have the dual identities: real and virtual, and have the ability to learn by themselves, can interact and communicate in the meta universe.

Once the meta universe is formed, it will have its own vitality, self-adjustment and internal driving force for evolution.

People can live in the real and virtual world at the same time, which leads to the extension of people's neural perception and consciousness. The formation and development of the meta universe needs to interact with the real world, realize the complementation and

balance of the two worlds at the conceptual, technological, and cultural levels, and form a new civilized ecology. In the early stage of the meta universe, the interactive relationship between the two worlds was realized through the continuous change of the existence of real human beings, virtual machines and oracles as technical media. If human beings and their virtual lives gain more happiness in the social activities and lifestyles of the meta universe, bringing such feelings and experiences back to the real world, it will help change the real world for good and help deeply understand the concept of Human Community.

The Concept of Gods Universe in the Context of meta Universe

Regarding the definition of the function of the meta-universe, many people think that it should be a virtual world independent of the real world. In this world, people can realize the desires that are difficult or even not allowed in the real world, so that people's repressed emotions in the real world are released.

However, keeping the meta universe inside the advanced games and social aspects, will inevitably limit the imagination of the meta universe. Instead of an existence completely divorced from the reality, The meta-universe should be used as an extension of the real world, and can feed back and improve the real world, integrate it organically with the real world, allow the entire human race to step into a more advanced civilization.

If it only allows people to get a better gaming experience and pleasure, not only will it be easy to create a lot of addicted teenagers, in essence it can only be used as an entertainment. The meta universe can actually do more meaningful things, artists can make richer creations, reformers can try the reforms that would be carried out in reality, and thinkers can put forward more great ideas in the meta universe.

Many military powers in the world now use high technology to simulate warfare before war, so as to decide whether to launch a war or how to do it. With the growth of human science and technology, the destructive power of large-scale wars has become more and more terrifying, but the overall moral civilization of mankind has not been significantly improved, and all countries have their own national interests as the core in their foreign exchanges. Few people can think about problems from the perspective of the entire human civilization. Therefore, the possibility of human self-destruction is increasing day by day.

Technically speaking, the meta-universe can not only be physical objects in virtual reality, in fact, with various people in reality, the relationship between people can also be simulated

into the meta-universe, thus forming the social relationship in the meta-universe corresponding to reality, and discuss the better development direction of human civilization, the most important thing is to avoid the huge price of reform in reality.

In addition to virtual reality, the meta-universe can also add elements from mythology, allowing people to freely imagine more incredible fantasy, and this is also the concept of Gods Universe. The Gods universe was proposed under the concept of meta universe. God represents people's beliefs and desires, and Gods Universe hopes that all members can uphold their beliefs and realize their wishes without harming the interests of others.

The economic model of Gods Universe Basic Token

Token symbol: GODT (Gods Universe Token)

Total: 1 quadrillion (plus 6 decimal places)

Basic features: 1. Large-scale airdrop 2.No additional issuance 3. Deflation mechanism 4.

Voting can be conducted when the Gods Universe community makes major decisions

Icon: Rattlesnake, an ancestor creature of the universe in a self-swallowing state, it has an immortal body, and has a perfect biological structure, symbolizing infinity, circulation and so on.

Original token distribution:

(1) 20% are used for IDO. During IDO, users can buy GODT through the official website of God Universe.

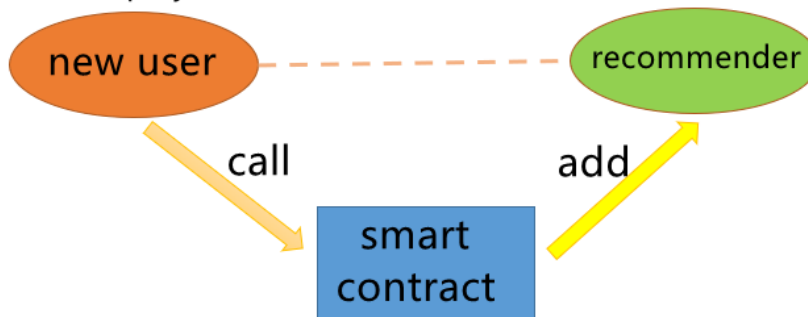

(2) 25% are provided for liquidity and user mining rewards.

(3) 35% are destroyed into the black hole addresses

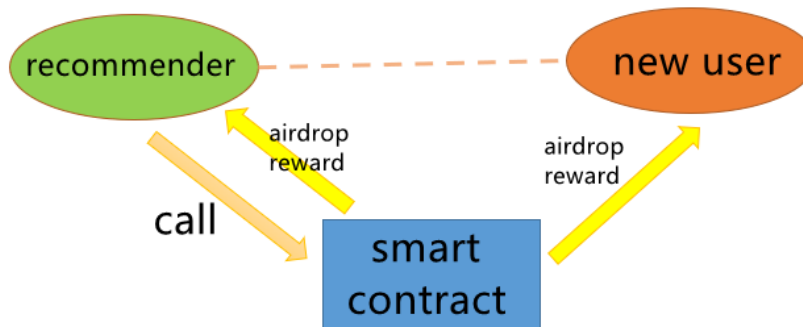

(4) The 10% are in God Universe Foundation, and will be gradually distributed to the people and teams who have contributed to the project with the development of the project.

(5) 10% are for long-term airdrop. Airdrop through the recommender mechanism.

Step 1 to collect airdrop by the recommender mechanism:

Step 2 to collect airdrop by the recommender mechanism:

Introduction to the recommender mechanism: when the recommender address is set for the new address for the first time, both the new address and the recommender address will receive tens of millions of airdrops. In the early stage of the project, 90 million GODT will be airdropped to the new address to the recommender Address airdrop of 30 million GODT, and the number of airdrops will be adjusted appropriately according to the development of the project. After setting the referrer's address, every fund transferred from the new address will be deducted 2% and transferred to the referrer's address.

Trading rules: When transferring, 8% of the principal is deducted as a transaction fee. among them,

- (1) The black hole destroys 2% of the principal and realizes the deflation mechanism.
- (2) The project management foundation receives 2% of the principal for the following purposes: to increase the liquidity of the token in the decentralized exchange, and to support the development and operation of the God Universe community project.
- (3) The referrer's address receives 2% of the principal and will be transferred to the project management foundation if no referrer is set.
- (4) The airdrop address receives 2% of the principal, and the airdrop is issued for project expansion.

Token administrator account management: in the early stage, it is managed by the founding team, then multi-signature will be implemented. The multi-signature management

addresses are created by the God Universe Community to gradually realize the autonomous management of the community.

Gods Universe NFT

Create vip identity card for the God universe community and open a variety of high-level and interesting playing methods. Adopt ERC-1155, a new generation token standard for future games.

Features of product:

(1) With the theme of Eastern and Western myths and legends, many mythical characters are introduced to create NFT cards.

(2) Players need to use the corresponding number of GODT tokens to bid for the NFT cards of the gods.

(3) Cards can be exchanged in the God Universe Card Market. Buyers and sellers can specify the number of GODT tokens required for the corresponding card. When the counterparty accepts the exchange price, the exchange can be exchanged through the exchange interface of the smart contract.

(4) Card equipment upgrade mechanism. When the player gathers the mythical character cards and the corresponding equipment cards, they can upgrade their equipment.

(5) Card synthesis upgrade mechanism. When the player gathers multiple mythical character cards after the equipment has been upgraded, the characters can be integrated and upgraded.

(6) Pledge card mining. The mining income is related to the card level. The higher the card level, the higher the income obtained by staking the same time.

(7) Card recycling mechanism. In order to avoid the emergence of players who urgently need to sell NFTs like some other NFT communities, even if the price is lower, there will be no buyer taking the phenomenon, the God Universe Community provides a smart contract recovery mechanism. When players want to sell NFT cards urgently, if they cannot find a buyer to take over, they can sell them at the recycling price through the recycling mechanism.

(8) Vision: As a holographic platform for a large-scale God universe game in the future, to obtain game characters, equipment and various benefits to exchange tokens.

God Universe Development Plan

1. First apply the blockchain service to build the God universe community, rely on all members of the God universe to continuously optimize the community organization structure, build the God universe community culture, and improve the God universe development plan.
2. Introduce the concept of community autonomy and UGC, encourage innovation, and reward all members who have contributed to the universe.
3. Create a GaaS type of God universe game, GaaS (Game-as-a-Service).
4. Improve the ecological civilization belonging to the God universe community, pursue the progress and innovation of science and technology and civilization, and contribute to the development of the entire mankind.
